NEWTON'S UNIVERSAL LAW OF GRAVITATION

Every body in the universe attracts every other body with a force which is directly proportional to the product of their masses and is inversely proportional to the square of the distance between them.

The direction of force is along the line joining the centres of the two bodies.

Let two bodies A and B of masses m_1 and m_2 are placed at a distance 'r' from each other. Let 'F' be the force of attraction between the bodies.

Then,

- (i) the force of attraction is directly proportional to the product of their masses
i.e. $F \propto m_1 m_2$
- (ii) the force of attraction is inversely proportional to the square of the distance between them
i.e. $F \propto \frac{1}{r^2}$

Dalton's Symbols of Elements

Dalton was the first scientist to use the symbols to represent elements in a short way. Dalton's symbols are different from the symbols used by the chemists. Dalton's symbols are made up of circles. We will first discuss the Dalton's symbols of elements and then the student symbols of elements.

Element	Dalton's symbol	Element	Student's symbol
Hydrogen	●	Iron	⊙
Carbon	●	Copper	⊙
Oxygen	⊙	Silver	⊙
Phosphorus	⊙	Gold	⊙
Sulphur	⊙	Lead	⊙
Platinum	⊙	Mercury	⊙

Blog

The term "blog" is derived from "weblog", a diary or journal on the Web. The content of the blog comes on the blog and is known as blogger or author of the blog. The activity of updating or writing the blog is called blogging.

The "blogger" writes periodically about a certain topic of his or her interest. The content of blog is presented in reverse chronological order (newer content appear first). Blog content is often referred to as entries or "blog posts".

Blogs are typically run by an individual or a small group of people to present information in a conversational style.

1. Personal Blog

This is the most common type of blog. Millions members of blogs on the internet belongs to this category. After all, blogging is started off as a way of creating an
