Below the top bar, there are several video thumbnails of participants, including Ankur Sharma and Naveen Gupta. The main content area displays a slide with the following text:

What is cyber security ?

Cybersecurity refers to a set of techniques, used to protect the integrity of networks programs and data from attack damage and unauthorized access.

The slide features a graphic with various icons representing cybersecurity concepts like a laptop with a padlock, a shield, a key, a virus, and a network diagram. To the right of the slide, a chat window is open, showing a list of messages from participants, including 'Good afternoon everyone' and 'I am Rupesh Kumar from Loyola School, Harnaut, Nalanda, Bihar'. The bottom of the slide shows a search bar and a taskbar with icons for Unmute, Start video, Share, and other controls. The system tray shows the time as 1341 on 08-07-2021.

Relationship between cybersecurity and other security domains

Cybercrime is a criminal activity where services or applications in the Cyberspace are used for or are the target of a crime.

Information security is concerned with the protection of confidentiality, integrity and availability of information in general, to serve the needs of the applicable information user.

Application security is a process performed to apply controls and measurements to an organization's applications in order to manage the risk of using them.

Network security is concerned with the design, implementation, and operation of networks.

Denial-of-Service Attack

The purpose of DoS is to prevent access to the target system.

Denial-of-Service (DoS) Attack

In the most common example of Denial-of-Service (DoS) attacks, an attacker uses a network of hijacked computers.

This network is used to flood the target site with phony server requests, leaving no bandwidth for legitimate traffic.

Install OS / Software update

- Updates-sometimes called *patches*-fix problems with your operating system (OS) (e.g., Windows XP, Windows Vista, Mac OS X) and software programs (e.g., Microsoft Office applications).
- Most new operating systems are set to download updates by default. After updates are downloaded, you will be asked to install them. Click yes!
- To download patches for your system and software, visit:
 - Windows Update: <http://windowsupdate.microsoft.com> to get or ensure you have all the latest operating system updates only. Newer Windows systems are set to download these updates by default.
 - Microsoft Update: <http://www.update.microsoft.com/microsoftupdate/> to get or ensure you have all the latest OS and Microsoft Office software updates. You must sign up for this service.
 - Apple: <http://www.apple.com/support>
 - Unix: Consult documentation or online help for system update information and instructions.
- Be sure to restart your computer after updates are installed so that the patches can be applied immediately.

RUN ANTI-VIRUS SOFTWARE

- To avoid computer problems caused by viruses, install and run an anti-virus program like Sophos.
- Periodically, check to see if your anti-virus is up to date by opening your anti-virus program and checking the *Last updated: date*.
- Anti-virus software removes viruses, quarantines and repairs infected files, and can help prevent future viruses.

PROTECT PASSWORDS

- Do not share your passwords, and always make new passwords difficult to guess by avoiding dictionary words, and mixing letters, numbers and punctuation.
- Do not use one of these common passwords or any variation of them: qwertz, letmein, password1, iloveyou1, (yourname)1, baseball1.
- Change your passwords periodically.
- When choosing a password:
 - Mix upper and lower case letters
 - Use a minimum of 8 characters
 - Use mnemonics to help you remember a difficult password
- Store passwords in a safe place. Consider using KeePass Password Safe (<http://keepass.info/>), Keychain (Mac) or an encrypted USB drive to store passwords. Avoid keeping passwords on a Post-it under your keyboard, on your monitor or in a drawer near your computer!

BACK UP IMPORTANT FILES

- Reduce your risk of losing important files to a virus, computer crash, theft or disaster by creating back-up copies.
- Keep your critical files in one place on your computer's hard drive so you can easily create a back up copy.
- Save copies of your important documents and files to a CD, online back up service, flash or USB drive, or a server.
- Store your back-up media in a secure place away from your computer, in case of fire or theft.
- Test your back up media periodically to make sure the files are accessible and readable.

Cyber Ethics

"Cyber ethics" refers to the code of responsible behavior on the Internet. Just as we are taught to act responsibly in everyday life with lessons such as "Don't take what doesn't belong to you" and "Do not harm others," we must act responsibly in the cyber world as well.
